- The image shows two diagrams illustrating symmetric encryption. In the left diagram, a client (C) sends a 'pubkey' to a server (S). The server (S) then sends a 'key' to the client (C). The client (C) uses the 'key' to encrypt a message 'abcd' into 'xxxxxx'. In the right diagram, the client (C) sends a 'key' to the server (S). The server (S) then sends a message 'abcd' to the client (C), which is encrypted into 'xxxxxx'. The word '对称' (Symmetric) is written at the bottom right, indicating that the same key is used for both encryption and decryption.
